

Living things and their habitats

Recap:

- There are different animal groups
- Some animals eat other animals
- Some animals eat plants
- Some animals eat plants and animals

Crucial Knowledge:

- Habitats are where living things live
- All living things live in a habitat
- Things are living, dead or never lived
- A food chain shows how animals get their energy
- Food chains always start with a producer
- A producer is a plant, a plant makes its own food
- The arrow in a food chain means 'is food for'
- Living things depend on each other for survival if something is taken away or destroyed, the living things might not survive or may have to adapt

Extended Knowledge:

- Living- animals
- Dead- fallen leaves
- Never lived- car
- Habitats can be hot or cold, wet or dry, on the ground or up high
- Animals live in habitats which suit them best – fish can breathe in water and swim well so they live in water.
- Living things show signs of life
- Dead things are no longer living.
- Things that were never living have never shown any signs of life.
